

STRICKLAND LAB
University of Idaho
Department of Soil & Water Resources

Master's Student in Microbial Ecology

We are seeking a motivated, ambitious individual to pursue a Master's Degree with the Strickland Lab at the University of Idaho. This position will allow the Master's student to explore a topic aimed at linking microbial community composition to ecosystem processes. Such a topic may include, links between agricultural antibiotics and antibiotic resistance in soil microbial communities; interactions between aboveground and belowground communities; agroecology and soil microbial communities; and the role of microbial communities in leaf litter decomposition. For more information on active research topic in the Strickland Lab, please visit our website: www.stricklandlab.com

The Master's degree would be awarded in the newly formed Department of Soil and Water Resources (Currently the [Department of Plant, Soil, and Entomological Sciences](#)) at the University of Idaho. More information on the degree program can be found here: <https://www.uidaho.edu/cals/plant-soil-and-entomological-sciences/phd-slr>.

The Strickland Lab offers an environment with a wealth of opportunities exploring both basic and applied research in soil microbial ecology! Please contact Michael Strickland (michaelstrick@gmail.com) for more information.

To apply, please send your Curriculum Vitae, cover letter, and contact information for at least two professional references to michaelstrick@gmail.com. Position is open until filled.
